Look What's New with RADAR®

Innovation in Incident Response Management

Contractual Obligations Workflow: New Patent and Downstream Capabilities

RADAR has been issued a third patent by the US Patent and Trademark Office for the unique approach to managing client notifications for contractual obligations. The Contractual Obligations Workflow uses the RADAR regulatory workflow to treat contractual obligations as jurisdictions, extending RADAR functionality to help manage upstream and downstream contractual notifications for complex incidents involving multiple clients and timelines.

Introducing Print Notification Letters

Manage the complete lifecycle of regulatory and contractual incident response. Create and maintain notification letter templates so that, if an incident requires notice to affected individuals, regulatory agencies, or clients, RADAR incorporates notification-specific data into the letters and generate notices for distribution while maintaining a repository of every notification sent.

RADAR Action Alert Add-on for Splunk

Splunk is a platform that monitors and analyzes security logs, allowing users to search, transform, save and trigger alerts based on various criteria and patterns that appear in the log files being monitored. With the RADAR Alert Action Add-on, users can manually or automatically create an incident in RADAR from Splunk. This add-on creates a gateway for other Splunk-connected security and privacy tools to have events pushed into RADAR as privacy incidents for further assessment.

GDPR: Address EU Data Privacy Concerns with Automated Assessments

Developments in European Law pose immediate regulatory risks and penalties to businesses that trade with Europe. RADAR closes the loop and fills gaps in existing compliance tools through automated assessments that allow an organization to be able to respond to every detected incident within the time period specified by GDPR (72 hours). RADAR is uniquely positioned to provide consistent, scalable, and context-sensitive decision support guidance for new and emerging data protection laws in Europe and beyond.

RADAR Named Top 10 Security System Solution Provider by Insurance CIO Outlook

Insurance CIO Outlook has selected RADAR, Inc. as one of the Top 10 Security System Solution Providers of 2017. Selection is based on company core competency, product and service offerings, innovations, and market reach of the company, along with the culture of innovation within the organization and challenges the company is tackling. RADAR is committed to being at the forefront of developing innovative incident response and decision-support solutions for the insurance sector and other highly regulated industries to help ensure compliance with complex and changing data breach laws.

About RADAR, Inc.

In today's world of increasingly complex and changing privacy regulations, cyber attacks, and data breaches, leading organizations trust RADAR®, a patented SaaS-based incident response management platform that simplifies and streamlines compliance with federal and state data breach laws. The RADAR Breach Guidance Engine™ leads users through an intuitive workflow that profiles and scores data privacy and security incidents and generates incident-specific notification guidelines to help ensure compliance with federal and state laws. Fortune 100 companies and other organizations from heavily regulated industries in finance, healthcare, insurance, and beyond rely on RADAR for an efficient and consistent process for incident response.
