

# Radar Incident Response Management

*Simplify compliance with automated multi-factor risk assessment*

Radar® is an award-winning SaaS solution for managing data privacy and security incidents involving sensitive personal information and complying with federal, state, and international data breach regulations – including GDPR.

## The Situation: Incident Risk Assessment Compliance

Organizations that hold regulated data in industries such as finance, insurance, and healthcare must comply with data breach notification laws of each U.S. state, as well as all applicable federal laws such as the HIPAA Final Breach Notification Rule and the Gramm–Leach–Bliley Act (GLBA) and international regulations such as the EU General Data Protection Regulation (GDPR). These regulations impose strict breach notification requirements on data breaches involving sensitive information.

The challenge for organizations is that each incident must be assessed in accordance with the federal, state, and international laws where the entity conducts business or the affected individuals resides.

Every incident is unique and requires detailed documentation and a consistent incident risk

assessment to determine if the incident qualifies for any exceptions or meets the compromise standard according to applicable laws. Compliance requires detailed knowledge of changing regulatory requirements and exception provisions in breach notification laws. A recent survey showed that organizations are typically spending 50 percent more time on risk assessment, documentation, and reporting since new federal rules came into effect.

## The Solution: Radar

Radar is a patented and secure SaaS solution that helps organizations comply with federal, state, and international breach notification laws. Radar is up-to-date with all state, federal, and international data breach notification requirements.

Radar guides users through a consistent and intuitive process for profiling and scoring any data privacy or security incident to determine whether the incident is a data breach. Radar generates an incident specific response plan and notification guidelines according to the federal, state, and international laws. Radar provides all

the required documentation to support the organization's burden of proof obligation under the breach laws.

## Why Use Radar?

Radar enables organizations to:

- Bring consistency and efficiency in conducting automated, multifactor risk assessments.
- Comply with data breach notification laws using Radar's patented Breach Guidance Engine™.
- Stay current with ever-changing breach notification rules and obligations.
- Stay organized by storing all incident assessment documentation, breach notifications, incident response, and audit logs in one location.

- Manage the complete lifecycle of regulatory and contractual incident response, from discovery and documentation to remediation and notification.
- Allow multiple users to collaborate during incident assessment for a more efficient, scalable workflow.
- Perform analysis to identify trends and areas for improvement and risk mitigation.

Feature	Benefit
Incident Risk Assessments	Consistent, automated risk assessment and breach notification guidance that ensures compliance with breach notification laws
Notification Letters Module	Track notification requirements, including who needs to be notified, how, and by what date. Create and manage notification letters directly from the incident profile, maintaining a repository of every notification.
Incident Management Dashboard	Easily scan high-level dashboards to manage incidents, identify trends, mitigate risk, and track incident status across teams.
Reports	Create standard reports using dynamic filters to meet data analysis and reporting needs.
Central Repository	Store incident related attachments, notes, reports and checklists to help with internal investigations and audits.
Administration & Policy	Customize incident assessment policies with user defined data and role based access controls.
Web Submission Forms	Allow employees to quickly and securely report and escalate incidents to internal investigators for follow up.
Contractual Obligations Workflow	A patented workflow extends Radar's functionality to ensure compliance with any contractual obligation to notify in the event of an incident.

RadarFirst's award-winning incident response management software is trusted by organizations in heavily regulated industries to reduce risk and simplify compliance with global data breach laws, including the EU GDPR.
