Radar Intelligent Incident Response

The only future-proof solution that connects current data breach laws to an automated risk assessment to provide notification recommendations in seconds.
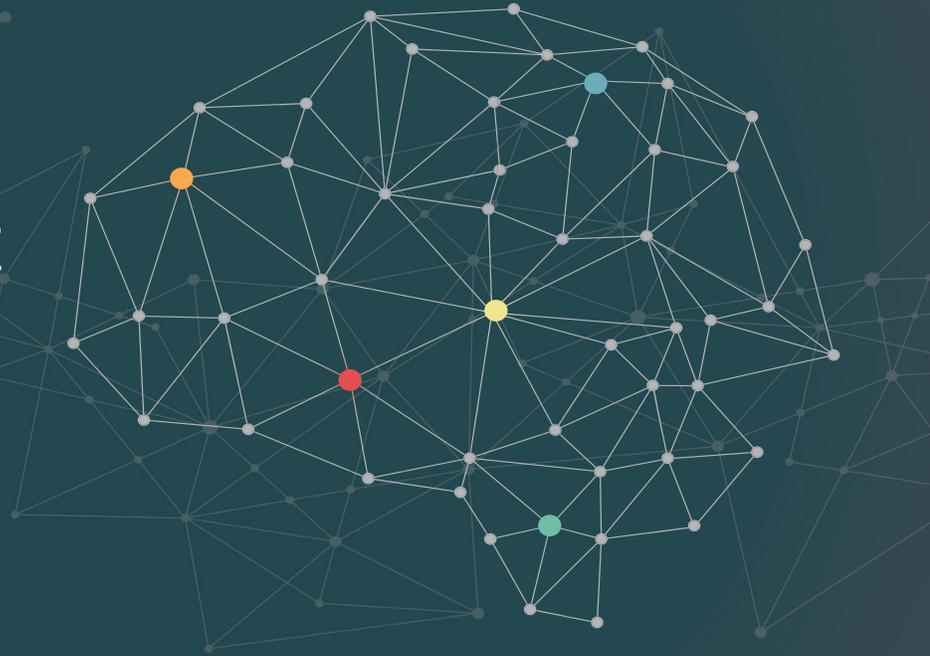

The primary challenge of privacy incident response is determining if an incident qualifies as a notifiable breach and if so, quickly identifying your notification obligations based on various state, federal, and international laws, as well as your third-party contractual obligations.

To meet compliance requirements and avoid costly regulatory or reputational penalties, privacy professionals race to determine if an incident requires notification, navigating a landscape of changing regulations, new deadlines, and varying definitions of personal information. With so many changing factors, making objective data breach notification decisions within regulatory and contractual timeframes is complex, time-critical, and risky.

While the work is formidable, it also remains necessary. When it comes to privacy incidents, it's imperative to scrutinize the current global privacy laws, risk of harm rules, and latest regulations — in order to determine the ins and outs of data breach notification and arrive at the correct decision.

Intelligent Incident Response is the permanent solution for a privacy landscape rife with complex data breach regulations. As the landscape shifts, Radar adapts.

## What Makes Radar Incident Response Software *Intelligent*?

Radar intelligent incident response software solves THE primary question after an incident: do you notify or not? With data breach notification decision-support built-in, you can make notification decisions with less effort and in a fraction of the time.

Radar enables an exhaustive investigation that ensures all critical details from an incident are captured. Upon completion of this incident profile, Radar automatically runs all the inputs through our patented Breach Guidance Engine™ and immediately produces the most important output: data breach notification obligations.

Radar not only enables the capture of all critical information involved in an incident, of which there are unlimited variations, but it seamlessly connects that critical data to the appropriate breach notification laws through automation.

That includes mapping all current state, federal, global, and contractual notification obligations to an automated risk assessment, giving you consistent incident risk scoring and decision-support guidance with every assessment, no matter the convoluted details.

Organizational Context

# of Affected Individuals

RISK LEVEL

GDPR **High**

Notify: Yes

Timeline: 72 hours
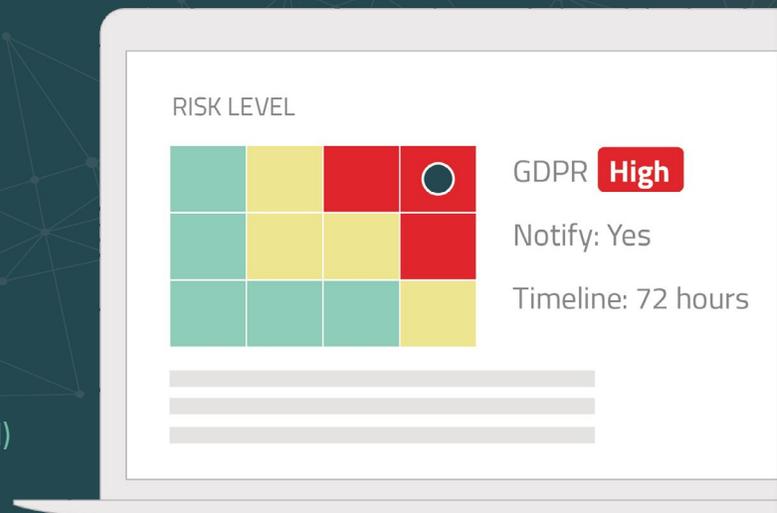

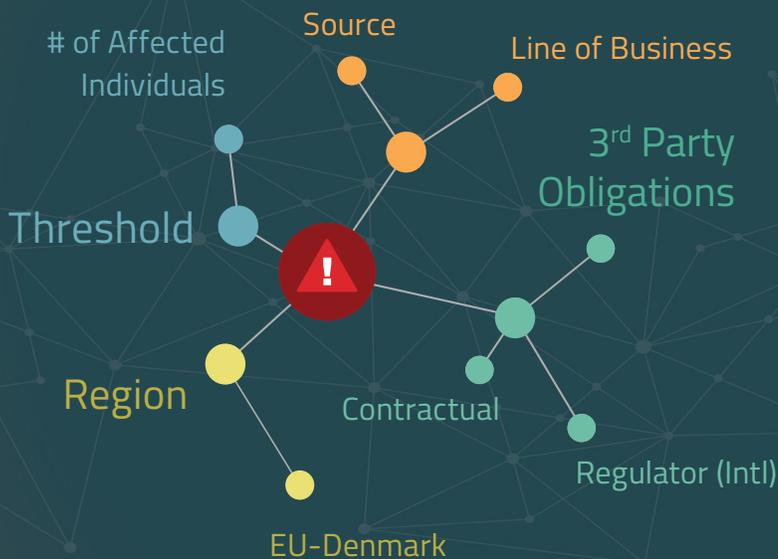

The Radar Breach Guidance Engine™ assesses all possible inputs and synthesizes your incident into a single output complete with all jurisdictional information paired with relevant notification guidance, timelines, and obligations.

Using a web portal or guest form, users can input the details of an incident from anywhere within an organization to be profiled for risk assessment. From there the Radar Breach Guidance Engine™ instantly:

- Determines if the incident qualifies as a breach

- Provides a jurisdiction-by-jurisdiction risk of harm analysis

- Alerts you of notification timelines for each jurisdiction

- Maps specific contact information for notification obligations for regulators

- Enables quick outreach with notification templates

Intelligent Means Future-Proof

The Breach Guidance Engine™ is the future-proof solution for privacy incident response. Radar is always up to date with current global data breach notification regulations to ensure customers meet compliance with data breach notification obligations.

The number of data breach laws continues to increase (showing no sign of slowing down) which exponentially increases the complexity in maintaining compliance. Knowing the laws saves you some time. But connecting the laws to the risk assessment saves you every time.

Intelligent Incident Response is a scalable and permanent solution that will grow alongside the privacy landscape and always deliver quick and accurate breach notification recommendations.

If you're ready for an incident response solution that is unmatched in consistency and repeatability, book a demo to see Radar can save you time, stress, and money today.
