Privacy Incident Management Feature Comparison

Radar® Privacy vs Others

Radar® Privacy

Key Features	What / Why	Radar Privacy	Others
Automated Incident Risk Assessment	**What:** A completely automated assessment that considers all relevant risk factors involved in a specific privacy incident and programmatically analyzes risk of harm based on all applicable data breach notification laws and regulations. **Why:** Cut your incident response time in half, ensure consistent compliance with breach notification laws, avoid risk of over- and under-notification, while also establishing and documenting burden of proof.	●	○
Playbooks	**What:** Create and assign customizable workflows for consistent execution across teams. Involve the right stakeholders at each stage of incident management and set a framework for scalable growth. **Why:** Reduce the time spent investigating and closing incidents with well-documented, repeatable processes while improving compliance. Ensure a repeatable, audit-compliant approach.	●	○
Global Breach Law Library	**What:** Up-to-date library of global data breach notification laws that are mapped to an automated risk assessment, including regulatory watchlists that track proposed and recently passed legislation. **Why:** Easily access and review laws that apply to privacy incidents. Assess incidents with up-to-date data breach notification laws.	●	◗
Incident Management Decision Intelligence	**What:** Specific guidance and consistent decisioning-criteria derived from patented automation that enables a sophisticated breach investigation and reveals notification obligations and recommendations. **Why:** Use signature, automated technology to solve the most complex challenges of data breach management with increased speed and accuracy.	●	○
Automated Third-Party Notifications	**What:** Automatic consideration of third-party contractual notification obligations in addition to applicable laws and regulations during the risk assessment of an incident. **Why:** Assess, manage, and automate your contractual data breach notification obligations with clients and both upstream and downstream entities.	●	●
Incident Dimensions	**What:** Collaborative and configurable incident response system for functional teams to run playbooks in order to resolve privacy and non-privacy incidents with patented automation. **Why:** Incidents often include multiple dimensions. Ensure the swift and accurate resolution of an incident by unifying all teams, each focused on their dimension, to work together in one solution; simplifying cross-departmental collaboration and accelerating time to incident resolution.	●	○
Multi-Region & Multi-Facet Incidents	**What:** Capacity to assess multiple jurisdictions and different situational facets to surface all notification obligations within a single incident record. **Why:** Streamline incident evaluation from Discovery to Assessment to Resolution for even complex incidents involving multiple jurisdictions and multiple facets.	●	○
Real-time Trend Analysis and Reports	**What:** Summary of incidents over time to facilitate analysis and trends and enable easy reporting. **Why:** Improve visibility of privacy incident management performance and meet the various data analysis and reporting needs for multiple stakeholders.	●	●
Benchmarking Metrics	**What:** Synthesis of aggregated and anonymized data to generate comparative incident response management metrics that benchmarks your organization across the industry and with peers. **Why:** Gauge your privacy incident response management performance with others to reaffirm business goals and improve operational efficiency.	●	○
