

Global Expansion of Privacy Laws in Radar[®] Privacy

Automated risk assessment support for data privacy regulations on a global scale.

As the global standard for privacy incident response and management, Radar[®] Privacy offers automated privacy incident risk assessments and obligation notification decisioning support for data privacy regulations worldwide.

The De Facto Global Standard

In 2018, Radar[®] Privacy began an expansion into global data privacy laws. The expansion marked a critical milestone in 2023: All jurisdictions worldwide are now supported by the Radar[®] Breach Assessment Engine, which powers Radar[®] Privacy, if they meet the following criteria:

- Recognized by the United Nations
- Population of at least 1 million residents
- Have passed a federal-level privacy law containing breach notification obligations which will take effect by the end of 2023

With 200 state, federal, national, and international data privacy regulations supported—and counting—the award-winning Radar[®] Privacy has set a new bar in privacy incident management and response, and is the only solution to offer automated notification obligation recommendations on a global scale.

Radar[®] Privacy's Global Reach Continues

RadarFirst remains committed to achieving complete global coverage for data privacy regulations within Radar[®] Privacy.

- Currently, we provide coverage of all countries which have relevant laws in effect.
- For countries without relevant laws in effect (approximately 80), the Radar[®] Breach Guidance Engine will surface the appropriate jurisdiction and subsequently capture the notification decision along with any notes.
- RadarFirst is constantly monitoring emerging legislation and will add or adjust coverage as needed.

Speed time to resolution while ensuring documentable compliance with data privacy laws worldwide with Radar[®] Privacy, the only solution that automates and simplifies the breach notification obligation decisioning process.

RadarFirst's award-winning incident management solutions are trusted by organizations to reduce risk and simplify obligation decisioning as mandated by privacy, cyber, and compliance laws. [Learn more at radarfirst.com](https://radarfirst.com)
