

Radar Privacy™

AI-Assisted Privacy Incident Management

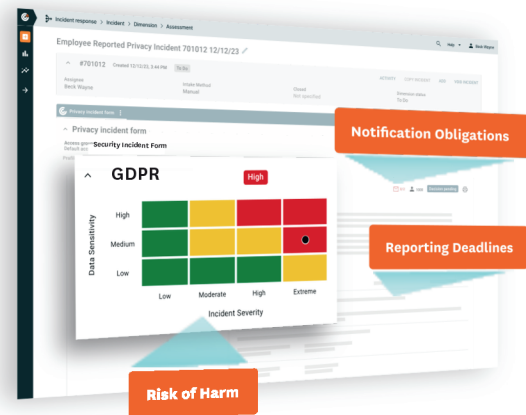

Radar Privacy helps organizations make fast, defensible privacy decisions by evaluating incident facts against global privacy laws, contractual obligations, and risk-of-harm standards.

THE CHALLENGE & WHY NOW

AI is accelerating privacy risk while exposing the limits of manual privacy operations.

Teams must quickly determine what happened, what obligations apply, and what actions are required, often under significant time pressure.

As incident volume grows, manual processes become harder to scale and more expensive to maintain. Radar Privacy helps teams process incidents at scale and at the speed modern businesses operate.

HOW IT WORKS

Global Law Library

A continuously maintained library of privacy laws, notification thresholds, deadlines, and regulatory obligations across jurisdictions.

Deterministic Assessment

Evaluates incident facts against applicable laws, contractual requirements, and risk-of-harm standards to produce consistent, explainable decisions.

Agentic Layer

Accelerates intake, triage, investigation support, and stakeholder coordination by reducing repetitive manual work and preparing decision-ready assessments.

Notification Guidance

Determines whether notification is required, who must be notified, and what deadlines or obligations apply.

Audit-Ready Documentation

Maintains complete records, rationale, and supporting evidence for every decision.

Benchmarking & Continuous Improvement

Analyze trends, response performance, and operational metrics to identify opportunities for improvement and risk reduction.

BUSINESS IMPACT

- Reduce time to resolution and accelerate notification decisions
- Improve consistency and defensibility
- Lower outside counsel costs
- Reduce over- and under-notification risk
- Improve audit readiness
- Scale operations without adding headcount

COMMON USE CASES

- Risk of harm and data breach assessments
- Federal, state, and global breach determinations
- Affected individual, Regulator, and third party notifications
- Cross-functional privacy investigations
- AI-related privacy incidents

WHY RADARFIRST

For more than a decade, RadarFirst has helped leading financial institutions, healthcare organizations, insurers, and global enterprises operationalize complex privacy obligations.

Our patented technology transforms evolving privacy regulations into faster, more consistent, and more defensible decisions while helping organizations safely scale AI adoption.
