

AI-Forward Incident Management

FOR PRIVACY AND AI

RadarFirst is an incident management platform that tells you exactly what steps to take to manage compliance, govern AI, and respond to privacy and AI incidents.

ONE PLATFORM. FOUR SOLUTIONS.

Privacy Incident Management

Automates risk of harm analysis, surfacing notification timelines for data subjects, regulators, and third parties under US federal, state, and global laws, so teams can make fast, defensible decisions.

AI Incident Management

Helps organizations investigate and manage AI incidents involving bias, model drift, harmful outputs, policy violations, privacy issues, and regulatory inquiries.

Custom Compliance Workflows

Standardizes cyber incident assessments, DSARs, PIAs, third-party risk reviews, regulatory reporting, and internal policy workflows with consistent, audit-ready decisioning.

AI Inventory + Risk Classification

Inventories AI systems, classifies risk, evaluates compliance with regulations and internal policies and frameworks, and provides a system of record for AI governance.

THE DIFFERENTIATOR: WHY YOU NEED RADARFIRST

Most platforms flag that a risk happened. RadarFirst tells you exactly what to do about it.

DETERMINISTIC LEGAL ENGINE

Our patented engine ensures the same input always produces the same outcome. Every decision includes documented rationale and audit-ready records.

AGENTIC LAYER

Automates and accelerates the manual work of intake, triage, and data preparation while keeping humans in final control.

THE PROBLEM WITH GENERAL AI

Large language models are probabilistic by design. For compliance and legal decisions, that means inconsistency, hallucination, and answers that can't be defended in front of a regulator.

FINANCIAL ROI

We are the trusted system of record.

7 of 10

Top US Banks

7 of 10
