

Radar AI Risk™

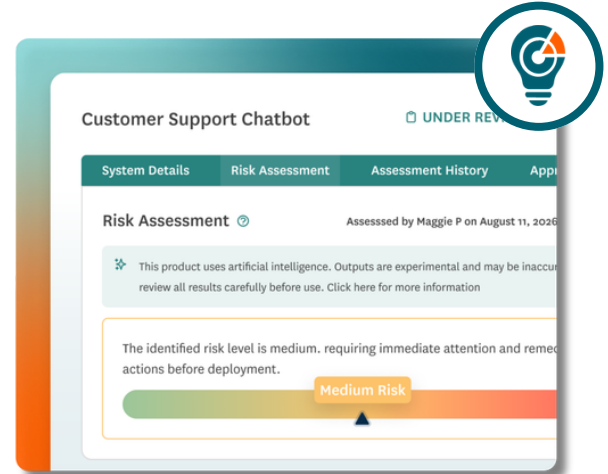

Turn AI Policies Into Operational Governance

Radar AI Risk helps organizations inventory AI systems, assess AI risk against external regulations and internal policies, and maintain a clear, audit-ready record of every decision. With a centralized inventory and framework-mapped assessments, it replaces manual spreadsheets and static checklists with a consistent, scalable governance process.

WHY IT MATTERS NOW

New AI systems are introduced across the business every day, often without centralized visibility or consistent oversight. At the same time, evolving regulations and internal AI policies require organizations to understand where AI is being used, assess risk consistently, and maintain clear documentation of every decision.

Radar AI Risk provides the operational process to inventory AI systems, evaluate risk, and demonstrate governance with confidence.

PLATFORM CAPABILITIES & FEATURES

Conversational Intake Experience

An intelligent, LLM-powered chat interface guides stakeholders through the intake process, capturing structured, compliant data without the need for manual forms.

Centralized AI System Inventory

Maintain a complete, version-controlled repository of all AI systems (including third-party models) that tracks ownership, use cases, and deployment context.

Automated Risk and Compliance Assessment

Instantly categorize an AI system's inherent risk according to applicable laws (e.g., the EU AI Act) and determine compliance with your own internal policies.

Mapped Guidance

Generate explicit risk-assessment rationales with citations mapped directly to selected policies, frameworks, or regulations, along with practical next steps.

Audit Trail and Overrides

All records are immutable and centrally stored, tracking every manual change to risk assessments with a timestamped rationale to streamline internal and external audits.

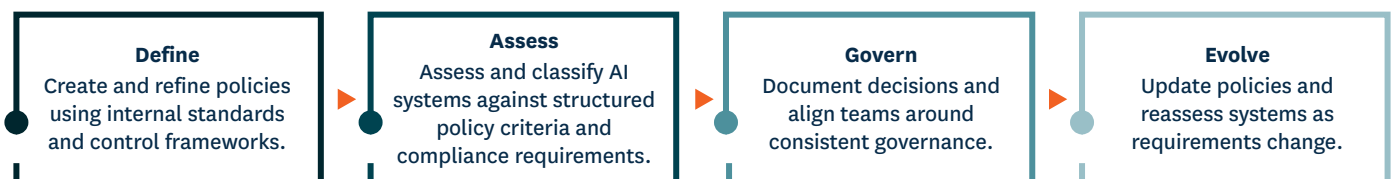

Custom Policies

Upload your organization's internal standards to automatically evaluate compliance and track alignment separately from regulatory risk.

THE METHODOLOGY

Radar AI Risk turns governance policies into structured workflows teams can execute.

WHY RADARFIRST

RadarFirst is an AI-forward incident management platform built on patented assessment technology and more than a decade of experience. Radar AI Risk extends this proven foundation by bringing AI system inventory and risk assessments into the same platform as privacy operations. The result is a unified approach to AI and privacy governance, with enterprise-grade scalability, version control, and audit-ready documentation.
