

# An Ecosystem of Support with RadarFirst Integrations

Optimize risk mitigation organization-wide with RadarFirst's preferred partners.

*We play well with others! Amplify your ROI across your risk mitigation and corporate support partners by integrating RadarFirst with key enterprise solutions, such as your HR software, SEIM tools, ticketing systems, and more.*

## Scale. Streamline. Automate.

Available integrations on the Radar® platform include prebuilt integrations and API-based integrations, as well as the option for custom or bespoke integrations.

## Prebuilt Integrations

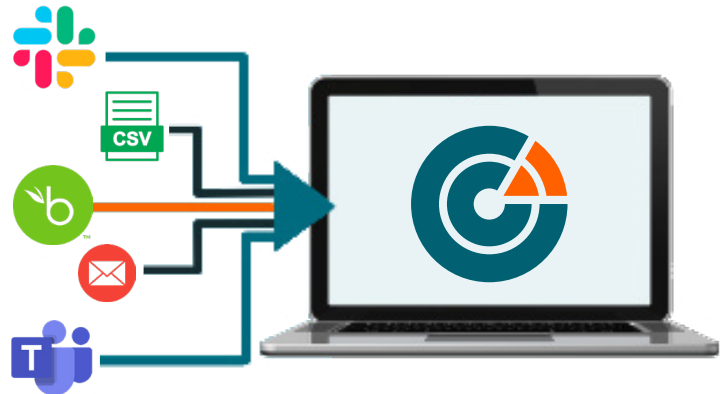

Pre-built integrations offer sophisticated and seamless connections to enterprise solutions. They are quick to enable and secure. Prebuilt integrations currently available in Radar® include:

### BambooHR

- Effortlessly sync your employee database updates to Radar® in real time, automating time-intensive but critical tasks and ensuring accurate incident data and assessments.

### IMAP

- Email-generated incident creation within Radar® offers flexible incident reporting via Gmail and Outlook, anytime, from anywhere to reduce reporting delays and, ultimately, an incident's discovery-to-assessment time.

### Slack

- Never miss a critical Radar® incident update by leveraging your enterprise collaboration tool with real-time Slack notifications, reducing your discovery-to-assessment elapsed time for Privacy incidents.

### Microsoft Teams

- Real-time incident alerts and updates with Radar® and Microsoft Teams. Leverage your enterprise collaboration tool to reduce your discovery-to-assessment elapsed time for privacy incidents.

### CSV

- Automate incident data intake to Radar® from a CSV file to seamlessly create new incidents, or to transfer incident history to Radar® from a legacy system.

## API Integrations

A robust and agile API offers additional integrations to Radar® Privacy, including:

### ServiceNow ITSM/SecOps

- Enable cross functional incident management between Privacy, Security, and IT teams with Radar® integration to ServiceNow's ITSM and SIR solutions, reducing mean time to incident resolution.

### ServiceNow Privacy Management

- Full spectrum privacy incident response and management, from efficient digital workflows to assessing privacy incidents and automating the breach notification decisioning process, potentially reducing both regulatory fines as well as costly impacts to organizational trust.

### Protenus

- Automatically synchronize PHI incident data between Protenus and Radar®, creating a secure exchange of critical information to speed the assessment and resolution of privacy incidents.

### Splunk SOAR

- Sync your IT, Security, Privacy teams with a Splunk SOAR integration to Radar®. Automate incident creation, attachment uploads, and data syncs to generate Radar® data reports within Splunk.

## Custom Integrations

Developed in direct collaboration with our customers, custom-built integrations are designed to support enterprise-level customers who require unique support or intensive digital transformation. Bespoke integrations available for Radar® Privacy and Radar® Compliance.

Increase team efficiency, help remove cross-functional silos, and create an ecosystem of support for your cyber, privacy, and compliance teams. Join a supportive culture of efficiency and compliance made possible by RadarFirst and our strategic integration partners.
